

YOUR PC NEEDS TO CONNECT TO THE HARDWARE IN SOME WAY. THERE ARE BASICALLY TWO OPTIONS AVAILABLE

1. USING THE RS-232 STANDARD
2. USING A NETWORK CONNECTION

YOU CAN ALWAYS COMBINE THESE TWO METHODS IF YOU NEED MULTIPLE POINTS OF ACCESS.

RS-232

THE RS-232 STANDARD WILL REQUIRE A WORKING COM PORT IN THE PC.

THE COM PORT CAN BE EITHER INTEGRAL WITH THE MOTHERBOARD OF THE PC, IT CAN BE ADDED IN TO THE PC USING A COMPATIBLE PCI CARD, OR IT COULD BE DONE USING A USB ADAPTER.

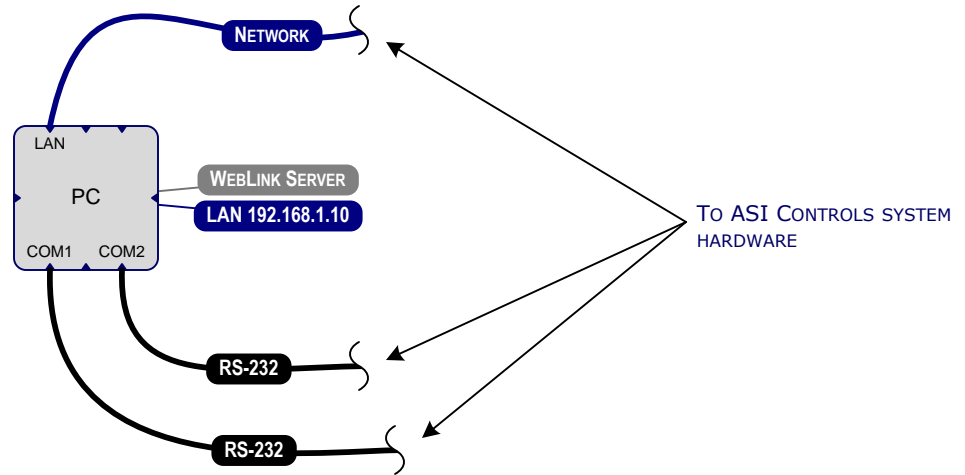

YOU CAN COMBINE ANY OF THE METHODS MENTIONED ABOVE TO ACHIEVE MORE THAN ONE COM PORT, IF NEEDED.

NETWORK

IF YOU ARE CONNECTING USING A NETWORK, YOU WILL NEED A WORKING NETWORK ADAPTER. IT IS PREFERRED FOR THE ADAPTER TO BE HARD-WIRED, BUT WIRELESS ADAPTERS WILL WORK AS WELL. THEIR RELIABILITY AND SECURITY IS NOT AS GREAT.

THIS ADAPTER CAN BE EITHER BE BUILT INTEGRAL WITH THE MOTHERBOARD OF THE PC, IT CAN BE ADDED IN USING A COMPATIBLE CARD, OR IT CAN BE A USB ADAPTER.

YOU CAN COMBINE ANY OF THE METHODS MENTIONED ABOVE TO ACHIEVE MORE THAN ONE NETWORK ADAPTER, IF NEEDED.
